Turn Any Font Into a Sketch Font

Tutorials | *June 11Th, 2009*

There are some popular sketchy fonts available that are great for grungy and hand-drawn designs and illustrations. My problem is, I want to be able to use this sketchy style in any font. Turn's out, it is actually really easy to do in Illustrator. Moreover, you can create a Graphic Style and easily apply the style to other editable fonts!

Notes

This tutorial was created with Adobe Illustrator CS4, but you should be able to create the tutorial in other Illustrator CS versions.

Final Image

Below is an example of the sketchy text we will be creating.

Vectips

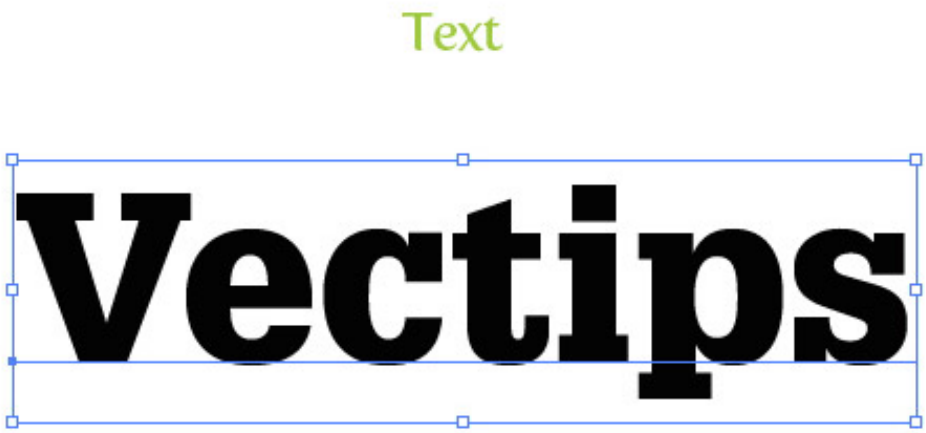
Vectips

Vectips

Vectips

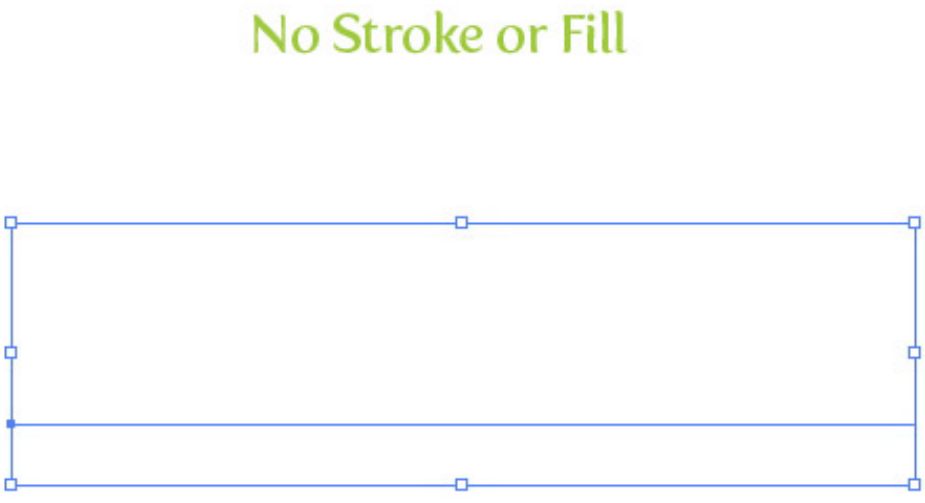
Step 1

Create a new document and with the Text tool (T), type out some text with the with the font of your choosing. I am using Glypha Black as my font.



Step 2

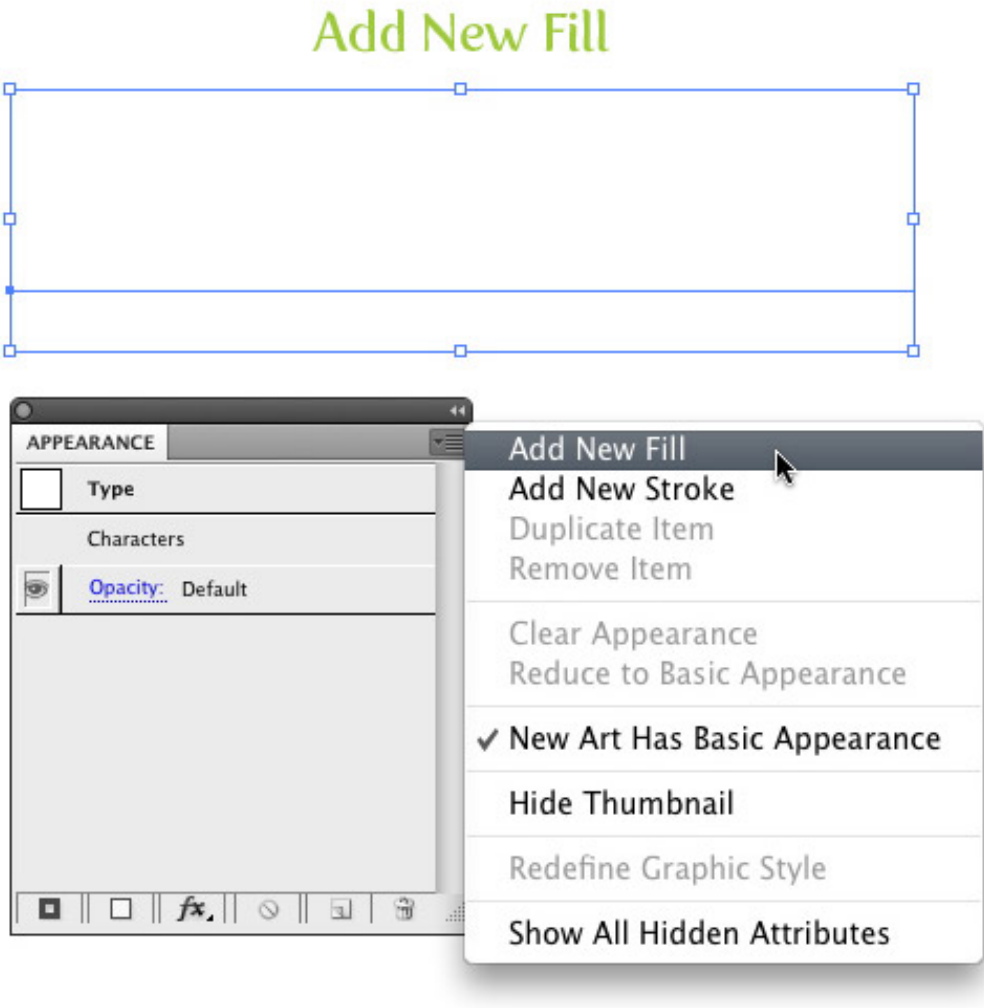
With the text selected, take off any stroke and fill. We are going to add a stroke a fill separate from each other in the Appearance panel in the next couple of steps.

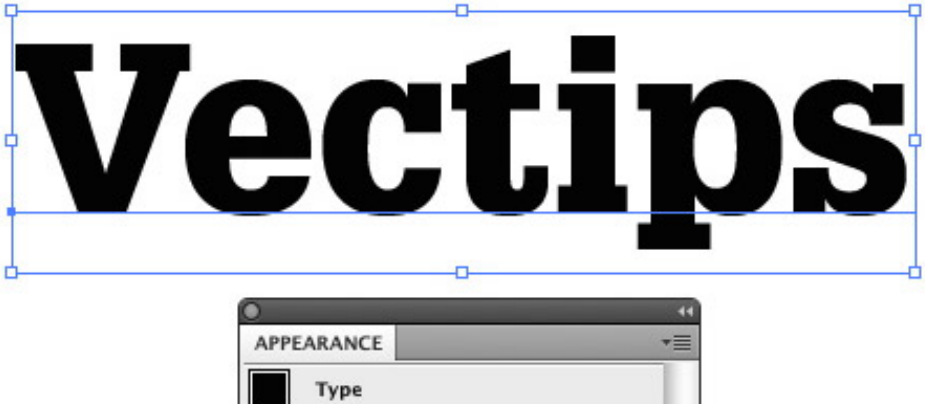


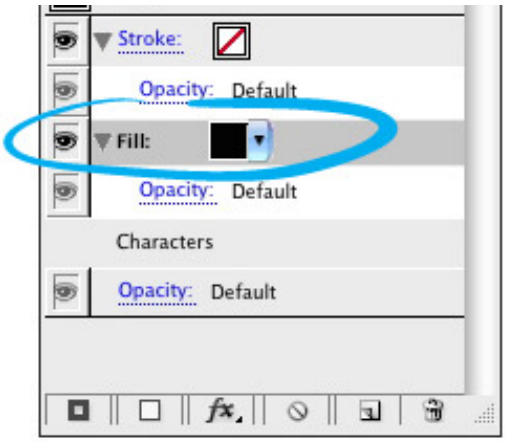
Step 3

With the no fill and no stroke text selected, open the pop-up menu in the Appearance panel

and chose Add New Fill. Keep the default black color of the fill.



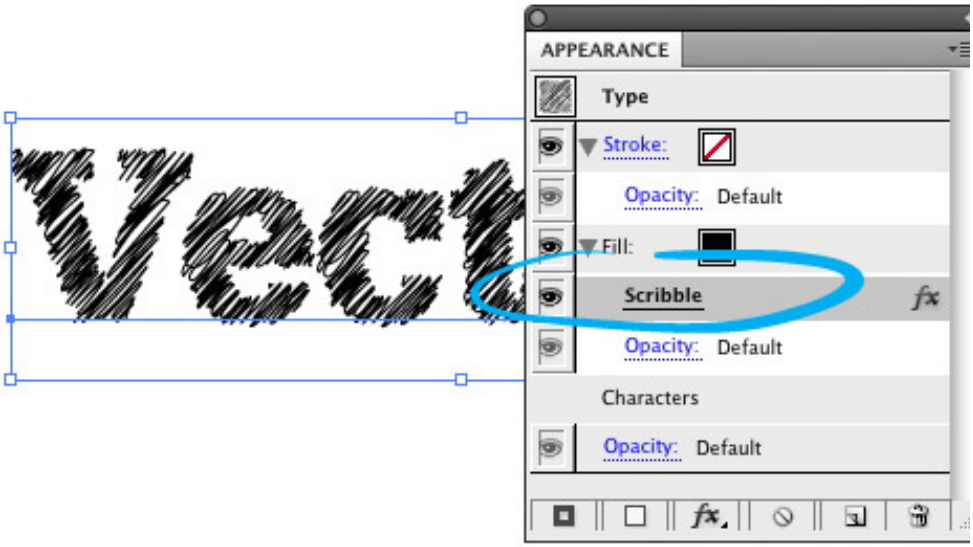




Step 4

Select the new fill in the Appearance panel and go Effect > Stylize > Scribble. With the Scribble Options dialog open, change the Angle to 45, the Path Overlap to 0 px, the Path Overlap Variation to 2 px, the Stroke Width to 1 px, the Curviness to 0, the Curviness Variation to 50, the Spacing to 2 px, and the Spacing Variation to 1.5 px.

Scribble



APPEARANCE
Type
Stroke:
Opacity: Default

Wide

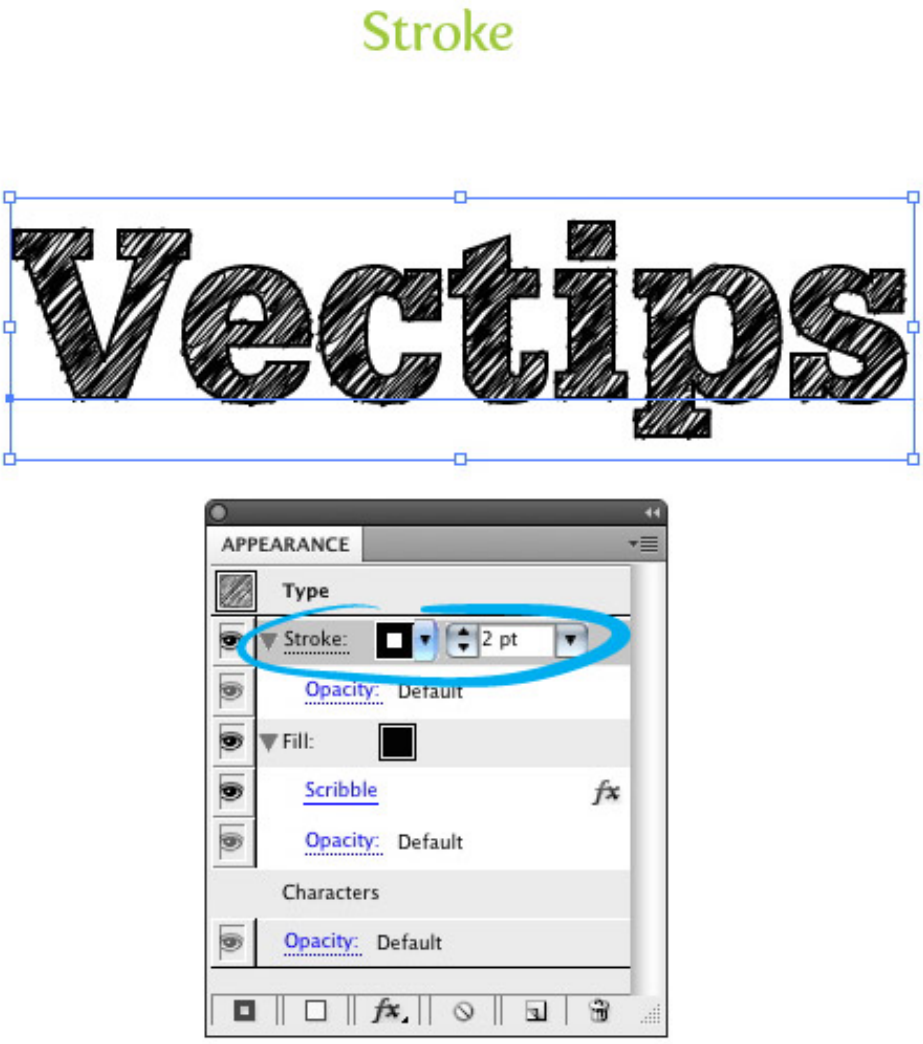
Step 5

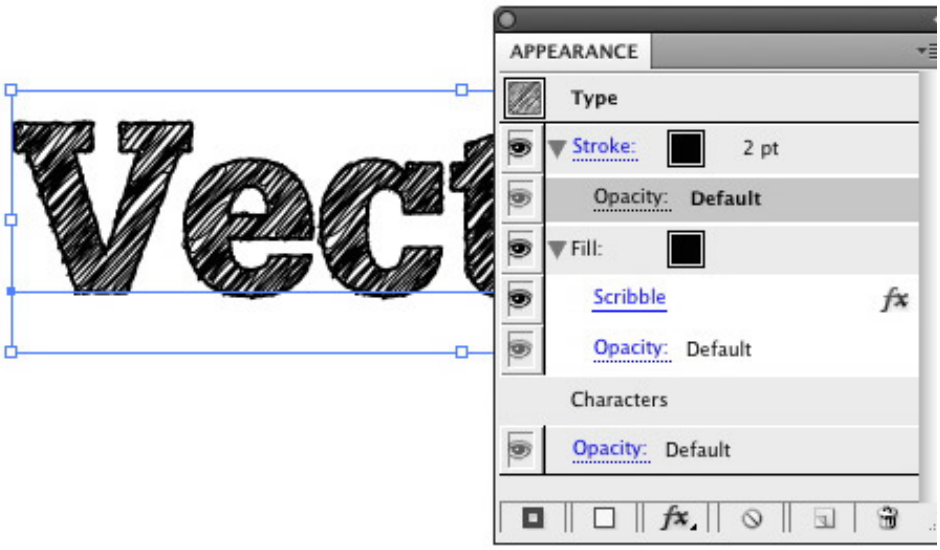
Select the Stroke option in the Appearance panel and give the text a 2 pt stroke.

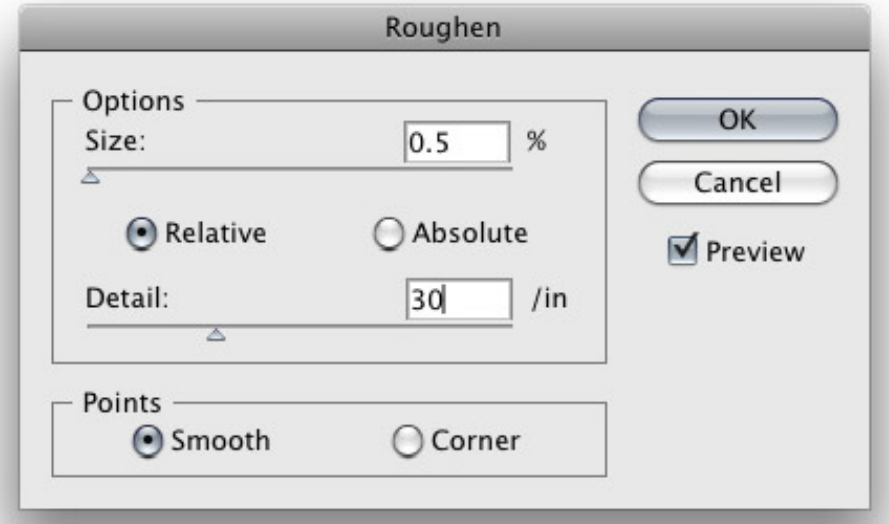


Step 6

With the Stroke still selected in the Appearance panel, go Effect > Distort & Transform > Roughen. In the Roughen dialog, change the Size to .5, select the Relative radial button, change the Detail to 30, and select the Smooth radial button for Point. This will give the stroke a little distress.

Roughen

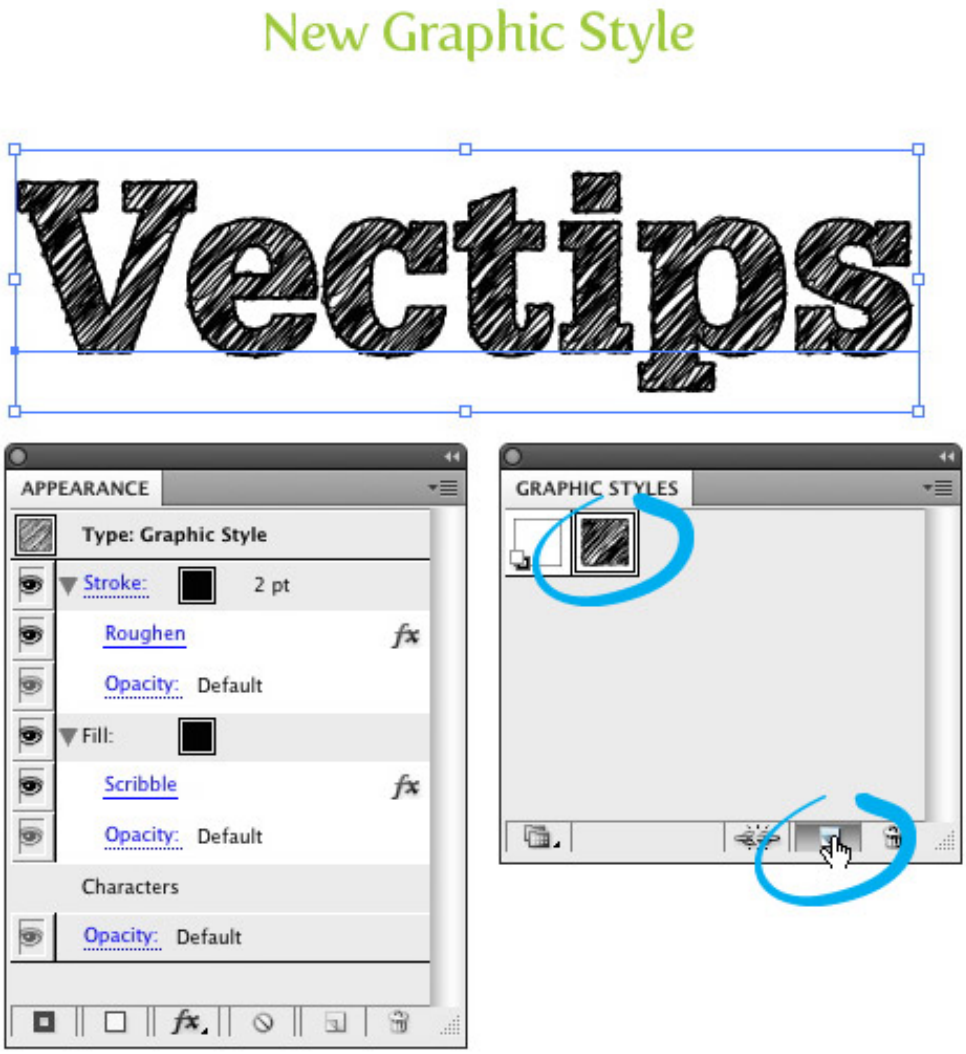




Step 7

Now, we have a custom sketchy font. Moreover, you can easily edit the font! To make this technique even more useful, let's create a Graphic Style so we can quickly apply these effects to other fonts and text. First select your font and take a look at the Appearance

panel. You can see all the effects in your type. Now, simply press the New Graphic Style Button in the Graphic Styles panel!

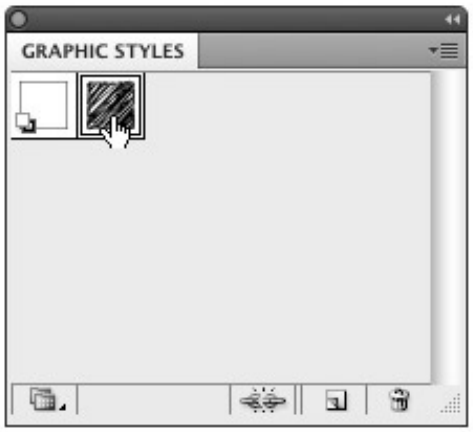


Step 8

Now type out some more text and change the font. With the text selected, press the thumbnail of your new sketchy Graphic Style and see all the wonderful sketchy results!

Text

Graphic Style



Experiment

You can apply the sketchy graphic style to other objects other than text. I also suggest playing around with the Sccrible and Roughen effect settings. Post links to images in the comments with your results!

Just be sure to check the license on the typeface you're going to use for this. You don't want to end up doing this for a client, only to find yourself being sued by the type designer or foundry. Look specifically for lines that mention modifications to the original design. Some do, but some don't. When in doubt, ask before you do anything other than just playing.

I found this tutorial incredibly helpful in doing exactly what I was looking to do, create a sketchy look to a font. However, I want to take it a step further from Illustrator. I want to create a font from the effect. I have outlined the font in Illustrator with the effect on it so each letter is individual (with scribble effect still on it). I have then tried to copy and paste an individual letter into Fontographer without success (it comes through as a solid black version of the font). I have also tried and copy and paste it just into another Illustrator file and it goes all white, losing the effect as well. Is there any way I can take this style as individual letters from Illustrator into Fontographer to create a version of our house font, retaining the scribble effect which is so perfect in Illustrator from using this technique?

Great tut thank you!

i'm having a few problems with it though.. i have to make my font 200 or so to get the sketchy-ness to look any good and even then it doesn't look as smooth as yours?? I've played around with the settings in the scribble options dialogue box but it doesn't seem to make it any better. my settings are in mm and i wondered if that was the problem? rather than px.. Any tips would be fantastic. Cheers
